

FTE

EP20 Low Pressure Oil Pump

FTE's new EP20 oil pump has been specifically engineered to operate in a transmission dry-sump lubrication system. A dry-sump lubrication system insures that the gears do not dip into the oil, since the sump is as the name suggests - dry. The new EP20 features an inexpensive highly integrated, lightweight centrifugal pump. Most of the components are produced from engineered plastic materials, which is highly unusual considering the application.

Category:

Module

Application:

2015 Audi Ultra

Weight Savings:

50% weight savings compared to traditional oil pumps

Methodology:

Material Replacement
